                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the ligand polypeptide encoding DNA are used to produce a recombinant control of the pituitary, central nervous system, pancreas and other tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a sample and to raise antibodies. They may also be used therapeutically, c. e. g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; disbetes; schizophrenia; disorders of growth hormone secretion; cancer; rheumatold arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of disease, for drug screening and as source of cell lines. The ligand cantisers; in drug development; for gene therapy and to develop thand antisers; in area development; for gene therapy and to develop the polypeptide sequences; an expresson as source of probes and primers; to identify cancer; in drug development; for gene therapy and to develop the polypeptide animals. Sequences ANM95174 to ANM95178 represent antigent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This peptide contains the partial C-terminal sequence of the synthetic CC ligand polypeptide 1992-L31 which is capable of binding to a G protein-coupled receptor protein. This peptide is used as an antigen to CC proper rabbit anti-bovine 1992-L31 antibodies which are used in binding cassays. Pharmaceutical compositions containing this ligand may be used CC assays. Pharmaceutical compositions containing this ligand may be used CC as a pituitary function modulator. This ligand could have specific or a pentral nervous system modulator CC capplications as a prophylactic or therapeutic agent for dementia, CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety CC syndrome, schizophrenia, trauma, growth hormone secretory disease, CC hyper and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, CC pinal injury, translent brain ischaemia, epilepsy, amylotrophic lateral CC degeneration, bone fracture, trauma, attopic dematitis, osteoporosis acute myocardial infarction, infertility, spinocerebellar degeneration, bone fracture, trauma, attopic dematitis, osteoporosis and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand CC affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAW97229-31 represent a ligand polypeptide derived fragments used to capture antibodies. The specification describes an agent for modulating produce antibodies. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a grotein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypovarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pituitary adenomatosis, brain tunour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, acromegaly, chiefri-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, Pumphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing the charical function can be used for treating or preventing charity adenomal saccharometabolism, abnormal lipidmetabolism or

The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary func
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 19P2 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.
                                                                                                                     WPI;
                                                                                               New

                                                                                                                                                          The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central mervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunosassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAX49290-302 represent peptide fragments of the 1992 ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative. Sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

                                                                                        This sequence represents a peptide fragment of a novel bovine pituitary CC derived ligand corresponding to amino acid residues 34 to 53 of the CC sequence in AAW31368 and is used in an assay to monitor ligand binding CC to the G protein-coupled receptor protein. Pharmaceutical compositions CC central nervous system modulator or a pancreatic function modulator. a CC central nervous system modulator or a pancreatic function modulator. CC This ligand could have specific applications as a prophylactic or CC therapeutic agent for dementia, depression, hyperkinetic syndrome, CC disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, CC growth hormone secretory disease, hyper- and polyphagia, CC hypercholesterolaemia, hyperglyceridaemia, hyperlipidaemia, hyperpolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC hyperprolactinaemia, diabetes, cancer, pancreatitis, spinal injury, CC transient brain ischaemia, amylotrophic lateral sclerosis, acute conjuctor oligogalactia. Assays can also be developed to screen compounds cc which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                                                                                                                               describes an agent for modulating prolactin secretion which comprises a contingent for modulating prolactin secretion which comprises a contingent for promoting prolactin secretion can be used for treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal contraction in a domestic mammal and as an aphrodisiac. The agents for continuity prolactin secretion can be used for promoting contration in a domestic mammal and as an aphrodisiac. The agents for continuity gonecyst adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, contractinoma, infertility, impotence, amenorrhea, galactorrhea, contractinoma, contraction, sincertility, impotence, amenorrhea, galactorrhea, contraction, agents can also be used as contracted or dyszoospermia. Contractinoma, thortion can be used for treating or preventing contraction, unthrifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT 10

The specification describes

Can agent for modulating prolactin secretion which comprises a

Can agent for modulating prolactin secretion which comprises a

Can injury of the agents for promoting prolactin secretion can be used for

Can treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal

Can syndrome, enthyroid or hypometabolism. They can by used for promoting

Can inhibiting prolactin secretion can be used for treating or preventing

Can inhibiting prolactin secretion can be used for treating or preventing

Can inhibiting prolactin secretion can be used for treating or preventing

Can inhibiting prolactin secretion can be used for treating or preventing

Can inhibiting prolactin secretion can be used for treating or preventing

Can acromegaly, Chiari-Frommel syndrome, Argona-del Castilo syndrome,

Can acromegaly, Chiari-Frommel syndrome, Sheehan syndrome or dyszoospermia.

Can acromegaly agents can also be used as contraceptives. The agents for

Can modulating placental function can be used for treating or preventing

Can chibitory agents can also be used for treating or preventing

Can charting placental function can be used for treating or preventing

Can charting placental function can be used for treating or preventing

Can be used for tre

                                                                                                                                                                                                     The present sequence represents a human type ligand fragment. It

is used in the course of the invention. The specification describes

an agent for modulating prolactin secretion which comprises a

CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)

CC protein. The agents for promoting prolactin secretion can be used for

CC treating or preventing hypocovarianism, genecyst cacogenesis, menopausal

CC syndrome, euthyroid or hypometabolism. They can by used for promoting

CC lactation in a domestic mammal and as an aphrodisiac. The agents for

CC inhibiting prolactin secretion can be used for treating or preventing

CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,

CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CC acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,

CC acromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,

CC forbes-Albright syndrome, liso be used as contraceptives. The agents for

CC modulating placental function can be used for treating or preventing

CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

CC abnormal agentabolism abnormal linidmatabolism or cyrtoxia.

```
cc which is a ligand for the G-protein coupled orphan receptor designated C GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant C ligand polypeptide. The ligand polypeptide, and its fragments, modulate C function of the pituitary, central nervous system, pancreas and other c tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, ce.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Schizophrenia; disorders of growth hormone secretion; cancer; cremmatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals cor study the function of the polypeptide encoding DNA or its mutein are used to convert the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC animals status and as source of probes and primers; to identify crelated sequences; in receptor-binding assays; for production of Ab and CC animals. The present sequence represents a bovine genome-derived ligand polypeptide fragment which is similar to the murine ligand-polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAW95191
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tissue; screen; therapeutic; binding; senile dementia; ligand; murine; Alzheimer's disease; Parkinson's disease; Huntington's disease; drug; Creutzfeld-Jakob disease; poisoning; schizophrenia; growth hormone; secretion; diabetes; cancer; rheumatoid arthritis; epilepsy; vasopressor;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a murine pituitary-derived ligand polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide ligand for orphan G protein coupled receptors -
for treating disorders of central nervous system, pituitary and
pancreas, and for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   05-NOV-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene therapy;

                                                                                      The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate C function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzhelmer's, Parkinson's or Huntington's CC disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disbetes; schizophrenia; disorders of growth hormone secretion; cancer; rheumatoid arthritis, epilepsy and many others, also to improve post-coperative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide sylventify as a source of probes and primers; to identify creaters; in drug development; for gene therapy and to develop completes which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and CC antispers; which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of ab and conclusions which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and CC antispers; which can be used for the preparation of anti-ligand polypeptide encoding assays; for production of Ab and CC antispers.

                                                                                                                                           This invention describes a novel oxytocin secretion-regulating agent which contains a ligand peptide or its salt for the G protein-coupled receptor protein. It is useful in the form of drugs for ameliorating, preventing and treating diseases relating to oxytocin secretion e.g. weak pains and atonic bleeding, before and after expulsion of placenta, uterine recovery failure, caesarean section, stoppage of artificial fertilization or galactostasis and is also applicable in veterinary medicine for promoting milk production in cow, goat and pig. This sequence represents a bovine peptide which acts as an oxytocin secretion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Bovine; oxytocin secretion promoter; G protein-coupled receptor protein; treatment; disease; pain; atonic bleeding; uterine recovery failure; cow caesarean section; artificial fertilization; galactostasis; goat; pig;

Database

Pred. No. score grea and is der No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, serived by analysis of the total score distribution.

CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.

SUBUNIT: MADE UP OF TWO CHAINS. THE A CHAIN IS RESPONSIBLE FOR DNA BREAKAGE AND REJOINING; THE B CHAIN CATALYZES ATP HYDROLYSIS. THE ENZYME FORMS AN A2B2 TETRAMER.
